Project Title	Intelligent ChatBot System using Artificial Intelligence and Deep Learning
<p>Brief Description of Project:</p> <p>The chatbots is straightforward to use, respond in an exceedingly timely fashion and be all round user friendly. The bots make the users interaction as easy and fast as possible to make sure that the users time isn't wasted which they get what they need with no difficulty or misunderstanding from the bot. The conversation flow and always keep the user on top of things of the conversation. Users should come far away from their experience with the chatbot and think that it absolutely was a fun, easy to use and simple interaction that may encourage them to return with no hesitation. With messaging platforms being the foremost used kind of application within the world, businesses are going to be looking to require advantage of this and begin to develop their own chatbots to figure together with their social media pages. Nowadays there's a lot of applications available and most users are going to be bored stiff of getting to download an application that they'll only use once or twice.</p>	
Platform	Deep Learning
Front End Tools	HTML Page
Back End Tools	Artificial Intelligence and Deep Learning
